0032 1
0033 1 ++
0034 1 FACILITY:
0035 1 Files-11 structure verification utility.
0036 1
0037 1 ABSTRACT:
0038 1 This is the main module.
0039 1
0040 1 ENVIRONMENT:
0041 1 VAX/VMS user mode.
0042 1 --
0043 1
0044 1 AUTHOR: M. Jack, CREATION DATE: 11-Oct-1980
0045 1
0046 1 MODIFIED BY:
0047 1
0048 1 V03-010 BLS0328 Benn Schreiber 30-JUN-1984
0049 1 Ensure ctrl/y re-enabled in exit handler.
0050 1
0051 1 V03-009 BLS0273 Benn Schreiber 20-FEB-1984
0052 1 Add ctrl/c, ctrl/y handler to unlock volume and exit
0053 1 verify.
0054 1
0055 1 V03-008 MLJ0116 Martin L. Jack, 13-Aug-1983 15:50
0056 1 In HEADER_ERROR, cover an error for a file sequence number of
0057 1 -1. This is the flag for previously deleted headers. Update
```

```

58      0058 1      for long filenames and long UICs.
59      0059 1
60      0060 1      V03-007 MLJ0107      Martin L. Jack, 4-Apr-1983 13:19
61      0061 1      Update for change to FH2$C_LENGTH.
62      0062 1
63      0063 1      V03-006 MLJ0095      Martin L. Jack, 17-Aug-1982 18:29
64      0064 1      Remove references to CLISEND_PARSE.
65      0065 1
66      0066 1      V03-005 MLJ0092      Martin L. Jack, 6-Jul-1982 13:41
67      0067 1      Avoid generating a leading space in ODS-1 format date.
68      0068 1
69      0069 1      V03-004 MLJ0090      Martin L. Jack, 25-May-1982 16:09
70      0070 1      Fix access violation after failure of CH$FIND_CH.
71      0071 1
72      0072 1      V03-003 MLJ0087      Martin L. Jack, 7-Apr-1982 15:00
73      0073 1      Fix access violation in traversing work list. Support ODS-1
74      0074 1      revision 2 disks.
75      0075 1
76      0076 1      V03-002 MLJ0084      Martin L. Jack, 25-Mar-1982 21:32
77      0077 1      Use a random sequence number rather than the next sequential
78      0078 1      sequence number when rewriting a bad header with a deleted
79      0079 1      header. This tracks a policy change in the ACP.
80      0080 1
81      0081 1      V03-001 MLJ0083      Martin L. Jack, 22-Mar-1982 9:35
82      0082 1      Add check for zero-length ODS-2 directory and return "directory
83      0083 1      file has invalid format" error.
84      0084 1
85      0085 1      V02-006 MLJ0075      Martin L. Jack, 29-Jan-1982 12:39
86      0086 1      Use FIB$V_NORECORD.
87      0087 1
88      0088 1      V02-005 MLJ0074      Martin L. Jack, 23-Jan-1982 23:24
89      0089 1      Rename [001003] to [SYSLOST] to remove VMS dependence on
90      0090 1      numbered directories.
91      0091 1
92      0092 1      V02-004 MLJ0061      Martin L. Jack, 30-Nov-1981 10:31
93      0093 1      Account for $GETDVI interface change.
94      0094 1
95      0095 1      V02-003 MLJ0055      Martin L. Jack, 15-Oct-1981 20:28
96      0096 1      Issue message if lost files not entered. Add /USAGE qualifier
97      0097 1      to generate disk-accounting data file. Issue message if
98      0098 1      directory file not named '.DIR;1'. Implement complete storage
99      0099 1      control block validation and reconstruction. Use $GETDVI. Add
100     0100 1      checks for quota file attributes.
101     0101 1
102     0102 1      V02-002 MLJ0035      Martin L. Jack, 27-Aug-1981 21:29
103     0103 1      Allow extension file ID to point to CONTIN.SYS.
104     0104 1
105     0105 1      V02-001 MLJ0030      Martin L. Jack, 30-Jul-1981 23:23
106     0106 1      Consider alternate index file header invalid only if it fails
107     0107 1      basic validation or if the map areas or EFBLK differ. Change
108     0108 1      listing default name string so that /LIST=LP: has a reasonable
109     0109 1      file name. Write-access the quota file to flush the ACP cache.
110     0110 1

```

: 1700      1696 1 ROUTINE INIT_VOL_DATA(RVN,ACCTL_VALUE): NOVALUE=
: 1701      1697 1
: 1702      1698 1  ++
: 1703      1699 1
: 1704      1700 1  FUNCTIONAL DESCRIPTION:
: 1705      1701 1      This routine initializes all the per-volume data during the initial
: 1706      1702 1      pass over the volumes and does validation of the basic file structure.
: 1707      1703 1      It finishes by deaccessing the channel.
: 1708      1704 1
: 1709      1705 1  INPUT PARAMETERS:
: 1710      1706 1      RVN          - Relative volume number.
: 1711      1707 1      ACCTL_VALUE - Value for FIB$$_ACCTL.
: 1712      1708 1
: 1713      1709 1  IMPLICIT INPUTS:
: 1714      1710 1      BUFFER      - Contains the home block.
: 1715      1711 1      HDR_BUFFER  - Contains the index file header.
: 1716      1712 1
: 1717      1713 1  OUTPUT PARAMETERS:
: 1718      1714 1      NONE
: 1719      1715 1
: 1720      1716 1  IMPLICIT OUTPUTS:
: 1721      1717 1      Variables between PER_VOLUME_BEG and PER_VOLUME_END initialized.
: 1722      1718 1

: 6300      6270 1 ROUTINE DO_REPAIR(P_PROMPT)=
: 6301      6271 1
: 6302      6272 1 ++
: 6303      6273 1
: 6304      6274 1 FUNCTIONAL DESCRIPTION:
: 6305      6275 1 This routine evaluates the qualifiers that specify whether a repair
: 6306      6276 1 should be executed.
: 6307      6277 1
: 6308      6278 1 INPUT PARAMETERS:
: 6309      6279 1 P_PROMPT - Prompt type flags:
: 6310      6280 1 Bit 0: Prompting is enabled.
: 6311      6281 1 Bit 1: Delete is an option.
: 6312      6282 1 Default is %B'01'.
: 6313      6283 1
: 6314      6284 1 IMPLICIT INPUTS:
: 6315      6285 1 NONE
: 6316      6286 1
: 6317      6287 1 OUTPUT PARAMETERS:
: 6318      6288 1 NONE
: 6319      6289 1
: 6320      6290 1 IMPLICIT OUTPUTS:
: 6321      6291 1 NONE
: 6322      6292 1
: 6323      6293 1 ROUTINE VALUE:
: 6324      6294 1 Bit 0 set if the repair is selected, clear otherwise.
: 6325      6295 1 Bit 1 set if delete is selected.
: 6326      6296 1
: 6327      6297 1 SIDE EFFECTS:
